

MOBILE POS SOLUTIONS

Mobile Point Of Sale for Airport Shuttle Operators

Faster service, shorter lines, take credit cards, make more sales!

In today's airport shuttle business, limited parking spaces and increasing competition has compelled innovative businesses to adopt winning strategies to gain a competitive edge. How? - By creating new revenue streams from their existing customer base using mobile technology.

Parking attendants can now quickly serve customers, select from an array of services, capture payment and offer customers an emailed receipt option. Not only does this impact the bottom line but improve customer loyalty. Customers can now enjoy the convenience of car services performed while they're in transit!
